## H11

H 11 is a $5 \%$ chromium hot-work tool steel that is characterized by high hot tensile strength, toughness, good thermal conductivity and insusceptibility to hot cracking.
Can be water-cooled to a limited extent.
Typical applications: besides the application area of hot-work steels, this grade is especially used for ejector pins, tool holders, bridge kind tools, liner holders, forging dies, hot work punches, shrink work chucks, etc.

## 1. Chemical Composition

| C | Mn | Si | S | P | Cr | V | Mo | Fe |
